

Characteristics of independent energy storage power station

Overview

Independent energy storage refers to an energy storage power station that, as an independent market entity, directly signs a grid connection agreement with a power grid company, promises to belong to the management of the power grid company, and signs contracts with relevant parties such as power grid enterprises and related power generation enterprises or power users according to their access location, stipulating the rights and obligations of all parties ; Allocated energy storage refers to energy storage power stations that are dispatched by new energy sources in order to obtain grid connection qualifications and do not have the conditions for direct control.
