

How to store photovoltaic energy

Overview

Solar panels generate electricity from the sunlight during the day. This means that if the grid goes down at night, solar panels will not generate electricity and therefore you cannot power. When you install a grid-tied solar system, the power grid acts as an immense source of energy storage. On the other hand, there is also a possibility of storing solar energy in batteries. Batteries are the most used form of solar energy storage, but there are even other options to store electricity of your PV system. One of them is directing the electricity from your PV to water electrolyzers, which generate hydrogen gas. Hydrogen is.
